

CIFA - CERTIFIED ISLAMIC FINANCIAL ANALYST PROGRAM ©™

Offered by SHAPE™ Financial Corp. and supported by Islamic Finance Training (IFT) Red Money Group

SHAPE™ now offers a comprehensive three level certification program to develop financial service professionals with a deep and on-going knowledge of Islamic finance. The elements of the program are meant to assure that users understand and retain the Islamic rules applied to finance, banking, and investment. The program addresses the global Islamic financial markets.

The CIFA Program is offered in three levels:

1 Introductory Courses

The courses in this level are designed for individuals who may be completely unfamiliar with Islamic banking and finance. The contents create building blocks for CIFA levels 2 & 3.

2 Product specific courses

The elements are meant to give a 360 degree overview of Islamic transactional concepts including Islamic law foundations, practical commercial examples, accounting, capital management, and adaptations for commercial purposes.

3 Advanced courses

The Advanced Courses are designed around six core universes of knowledge excluding accounting which is offered at this level by AAOIFI. A candidate may focus on a single universe or all integrated knowledge groups.

All modules include discussions of marketing, accounting, risk management, and comparison or contrasts to traditional banking and finance. All modules include real market exercises and mini-case studies. At the end of each module, there is an interactive game.

Our Methodology:

From theory to learning objects and serious games, CIFA's interactive materials are designed for you to retain work ready concepts.

Theory

Real World Exercises

Mini-Cases

Serious Games

Certification

Our Distinctions:

- **All courses are offered** in English and Arabic. Other languages will be offered soon.
- **Learn from the practitioners** who teach these courses regularly at leading financial institutions.
- **SCORM Compliant platform** - Industry standard web-based learning contents.
- **Multimedia learning objects** contents allowing students to achieve higher learning goals
- **Serious Games:** Engaging learning solutions in which the player engages with a virtual environment to build his/her knowledge and retain it for good.
